

FINAL HOUSEKEEPING FOR WEB PAGE ASSIGNMENT

MAKING LINKS WORK ON PERMANENT SITE:

1. Remove all evidence of Geocities coding within your three pages:

For instance, if you have a link that is written as:

<http://www.geocities.com/ninquiry2006/june/page1.html>

Edit the code to read:

`/june/page1.html`

Do this for both links (your navigation) and for images.

If an image is coded as:

<http://www.geocities.com/ninquiry2006/june/baby.jpg>

then edit to be:

`/june/baby.jpg`

MAIN PAGE LINK: MAKE YOUR FINAL LINK GO TO:

<index.html>

SENDING FILES:

To give me your final files (I need all three pages of code, and all graphics used), you can either:

1. Give me a list of all of the files that were used (and that are in your geocities folder)
2. Give me the files on a CD.
3. Winzip all files in a folder created in Winzip – <http://winzip.com>
4. Leave only the files actually used in your pages in your subdirectory where I can download and transfer them.
